Summary

Software Engineer with 2+ years of experience building scalable applications using Java, TypeScript, and React. Skilled in designing clean, maintainable systems with a focus on continuous delivery and cloud-native architectures, and experienced in collaborative Agile development. Passionate about writing high-quality code and solving complex business problems

Skills

TypeScript, JavaScript, Java, Node.js, Express.js, Fastify, Spring Boot, React.js, Next.js, PostgreSQL, MongoDB, Oracle ERP, AWS (EKS, EC2, ECR), Docker, Kubernetes, Helm, ArgoCD, GitHub Actions, Prometheus, Grafana, Loki, Fluent Bit, REST APIs, CI/CD, Object-Oriented Design, Design Patterns, Agile/Scrum

Experience

Onfuturesites Aug 2025 – Feb 2026

Full-Stack Engineer

- Worked closely with cross-functional teams to build scalable backend APIs using Node.js and Fastify, supporting thousands of daily requests with high reliability
- Built user-facing features using Next.js and React Native, improving usability and customer engagement
- Architected PostgreSQL schemas handling large datasets (100k+ records), improving query efficiency and data consistency
- Enhanced backend performance by optimising queries and service logic, reducing API latency by 30
- Contributed to architectural decisions in a fast-paced startup environment, ensuring scalability and maintainability

Technologies: Node.js, Fastify, React Native, Next.js, PostgreSQL, Prisma

DevOps Engineer | Freelance June 2025 – Oct 2025

- Built and executed CI/CD pipelines using GitHub Actions and ArgoCD, reducing deployment time by 60% and enabling near-zero manual intervention
- Containerised and deployed microservices on Kubernetes (AWS EKS), improving scalability and deployment consistency
- Partnered with development teams to improve deployment workflows
- Implemented monitoring and alerting systems using Prometheus and Grafana, reducing issue detection time and improving system reliability
- Integrated development and deployment workflows, reducing manual effort and improving deployment efficiency across teams

Technologies: ArgoCD, GitHub Actions, Kubernetes (EKS), Helm, Prometheus, Grafana, Loki, Fluent Bit, Docker, AWS (ECR)

Captain Fresh Aug 2023 – April 2025

Full-Stack Engineer

- Engineered backend services for ERP systems handling high-volume stock transfer workflows, improving operational throughput by 15%
- Built scalable REST APIs using TypeScript and PostgreSQL for complex business operations with high-frequency

transactions

- Optimised PostgreSQL queries (joins, indexing), reducing API response time by 150–200ms
- • Built Spring Boot microservices enabling secure enterprise integrations, improving system security and reliability
- Applied caching strategies, reducing API response times by 14% and decreasing database load significantly
- • Partnered with product and QA teams in Agile sprints, delivering 15+ features and improving release efficiency and time-to-market

Technologies: TypeScript, React.js, PostgreSQL, Sequelize, Spring Boot, Golang, Node.js, AWS

Projects

GoFarm – AI Agriculture Assistant Platform

- Built an AI-powered platform providing data-driven crop recommendations for farmers
- Integrated Retrieval-Augmented Generation (RAG), enabling context-aware responses and improving accuracy over standard LLM outputs
- Developed backend APIs using Node.js and MongoDB, supporting dynamic query handling and scalable data storage
- Established secure authentication and role-based access control for personalized user experiences
  Technologies: Next.js, Node.js, Express, MongoDB, HuggingFace Transformers, RAG

Education

Govt. Model Engineering College, Bachelor of Technology in Electrical and Electronics Engineering — Aug 2019 – June 2023
